What mQ Does

In its essence, measureQuick is a FREE app that connects to HVAC Bluetooth tools on the market. The app pulls in data from Bluetooth tools and runs diagnostics on the equipment the tools are connected to. mQ has 100's of diagnostic variations and has been tested with the National Institute of Standards and Technology. mQ also offers a web based dashboard for managers.

Standards and Data Integrity

mQ doesn't create its own standards (why reinvent the wheel?). It uses a range from various HVAC industry trade associations to validate the integrity of the running equipment. We excel in streamlining work and collecting data that is required for obtaining Trade Association Certificates, and because of that, ACCA and NCI have partnered with mQ to validate their Certificate process. If you are not currently a member of a Trade Association, look into one, or both, of the following. After all, if you're not completing work to standard, is it being done right? Find guidance from a professional standard association.

Premier Services

No subscription. Pay for services when you use them. When you pay for one Premier Service, it unlocks ALL the Premier Services for that system.

Cost \$5 / system / year – A system is considered that which is connected to one air handler. Unlock Premier Services on a system and all Services stay available, for an entire year.

Load your company account with credits (think gift card balance) and anyone listed under your company has access to them and pulls from the balance as needed.

Average return on investment for companies who use Premier Services – Over 500%.

Premier services include: Live data streaming, unlimited cloud storage, CRM integrations, unlimited photo documentation, Customer facing PDF reports, and the ability to screenshot.

People

measureQuick is not plug and play for Contractors. Onboarding requires guidance, training... and a little hand holding.
